

Hello,

Let me demonstrate some of the capabilities of Sweave. Here are the first 20 rows of a data frame depicting temperatures in New York City. I can first choose to output the code without evaluating it:

```
> library('UsingR')  
> five.yr.temperature[1:20,]
```

and then evaluate the preceding lines with the output following this sentence:

	days	years	temps
1	1	1995	44.0
2	2	1995	41.8
3	3	1995	28.1
4	4	1995	31.7
5	5	1995	21.3
6	6	1995	27.9
7	7	1995	42.8
8	8	1995	35.5
9	9	1995	34.4
10	10	1995	29.9
11	11	1995	30.7
12	12	1995	35.5
13	13	1995	47.2
14	14	1995	52.4
15	15	1995	56.9
16	16	1995	55.2
17	17	1995	50.3
18	18	1995	42.6
19	19	1995	39.3
20	20	1995	43.1
